

Abstract

~~In a~~ A method for operating a field device, which is connected by way of a data bus ~~[[D]]~~ with a control system ~~[[L]]~~, by means of a graphical user interface and a device description file for a field device ~~e.g. F1, F2, F3~~, the device description file includes two components, a data component and a presentation component, which are loaded together dynamically at run time into a browser~~[[.]]~~ Because wherein the data component and the presentation component are produced together as a device description file, and the presentation component can be matched exactly to the functionality of the field device. In this way, the operation of a field device ~~e.g. F1, F2, F3~~ is considerably simplified.
